

Incident Lifecycle Automation in ServiceNow

1. Ideation Phase

1.1 Project Title

Incident Lifecycle Automation in ServiceNow

1.2 Project Overview

The project aims to automate and standardize the complete **Incident Management lifecycle** using ServiceNow. The proposed solution enables Service Desk agents to create, classify, investigate, escalate, resolve, and track incidents while integrating Knowledge Management, Change Management, SLA tracking, and Child Incident Management.

The idea is to establish a structured incident-handling process where an incident can move seamlessly from initial reporting to final resolution while maintaining proper documentation and traceability.

1.3 Problem Statement

Organizations frequently receive IT-related issues such as network failures, VPN authentication problems, hardware issues, and application failures. When these incidents are handled manually or inconsistently, several problems may occur:

- Incorrect or incomplete incident classification.
- Delayed assignment to the appropriate support team.
- Difficulty finding existing solutions.
- Poor visibility into incident progress.
- Lack of proper escalation mechanisms.
- Manual creation and tracking of related change requests.
- Difficulty tracking recurring or related incidents.
- Incomplete cause and resolution documentation.
- Poor SLA compliance.

Therefore, there is a need for an integrated and standardized incident management solution.

1.4 Proposed Idea

The proposed ServiceNow solution automates the incident lifecycle by providing:

- Incident creation through Service Operations Workspace.
- Standardized incident classification.
- Knowledge article recommendations through Agent Assist.
- Assignment and escalation to appropriate support groups.
- Emergency Change Request integration.
- Child Incident creation.
- Cause and resolution documentation.
- Knowledge Article creation from resolved incidents.
- SLA and related-record tracking.
- Multi-team collaboration and incident visibility.

1.5 Project Goals

The major goals of the project are:

1. Standardize incident creation and classification.
2. Reduce incident resolution time.
3. Improve incident assignment and escalation.
4. Reuse existing knowledge for faster troubleshooting.
5. Integrate Incident and Change Management.
6. Track recurring issues using child incidents.
7. Maintain proper cause and resolution information.
8. Convert useful incident resolutions into Knowledge Articles.
9. Improve SLA compliance and service visibility.
10. Provide an end-to-end incident lifecycle.
